Mini Project Proposal (Phase 01)

Project Title :

Mood Fixer – Mood-Based Music Web Application

Group Details :

1. Name : K.H.D.T.Wijithaweera
   Reg No : ICT/2023/033
   Index No : 6025

2. Name : M.G.J.N.Wijesinghe
   Reg No : ICT/2023/039
   Index No : 6029

Mini Project Proposal

1. Selected Theme

Moodify – Mood-Based Music Web Application

This project is an interactive web application designed to provide music playlists according to the user's selected mood. The system focuses on improving user engagement through mood-based entertainment and simple interactive web features.

2. Purpose of the Web App

The purpose of this web application is to allow users to select their emotional mood and receive suitable music playlists. Music can influence emotions and help users relax focus, or feel motivated.

The application also allows users to create accounts and submit feedback, improving interaction between users and the system while providing a personalized experience.

3. Features to be Implemented

3.1 Mood-Based Music Playlist

Users can select a mood, and the application dynamically displays music playlists suited to that mood.

3.2 Login and Signup System

Users can register and log into the application using validated input forms.

3.3 Feedback Submission

Users can submit feedback through a form with proper validation to ensure correct user input.

4. Target Audience

The target audience for this application includes:

- University students
- Young adults
- Music lovers
- Users interested in mood-based entertainment applications

The application is designed to be simple, responsive, and user-friendly for a wide range of users.
